Strong board to support separation of products on a pallet or internal packaging solution.

Humid proof and flexible, Solidboard is ideal for use in the glass, metals and stationary segments. With one side anti-slip this product is great for stacking glass and other like products onto pallets. Solidboard provides protection without shrinkage. This anti-slip solution protects products from damage when slipping. The separator sheets offer load stability, reduced contamination, and greater product protection between layers of a variety of products.

Solidboard in use as layer pads.

Features and Benefits

■ Customisation
The outer surface can be provided in multiple colours of grey, kraftliner, white or with custom printing.

■ Humid proof
Designed to work in humid conditions, one or both sides can be produced with anti-humidity features.

■ Industrial use case
Industrial use within the furniture and packaging industry as the product is flexible yet robust and does not break easily.

Solidboard up-close with one side anti-slip.
